The NPRM does not include a revision to FAR Part 135.411(a)(1) to require reporting by operators of 9 or less aircraft in accordance with the new section 135.416. Is this omission intentional? If so, I suggest that the final rule be changed to include this requirement for operators of 9 or less aircraft, who maintain their aircraft under 135.411(a)(1). Here in Alaska, there are a large number of this type of aircraft in 135 operations, and the information from the reports required by 135.416 would be very useful in identifying trends, and would make a positive impact on safety here in Alaska.

Regards,

Larry West
